Retraction Notice

Based on a detailed investigation of this article [<http://dx.doi.org/10.2514/1.T4396>], it is believed that the results in the paper are potentially seriously flawed. Therefore, the results and conclusions should not be relied upon. This retraction has been initiated by the publisher.

In addition to numerous typographical errors that were found throughout the article, several missing terms and variables were identified following publication. Typographical errors were repeated many times in figures. Although the research methodology followed a standard procedure, from the perspective of someone reading the paper, the reader would not know there are many symbol errors, typographical errors, and incorrect symbols in the article, leading to misinterpretation of the results. It was believed that an erratum would not adequately clarify and correct the significant number of unresolved issues and errors.

Professor Asterios Pantokratoras from the Democritus University of Thrace in Greece is gratefully acknowledged for his detailed analysis and comments on this article.
